

## Minor Research How to Fabricate Thin Films by Using Spin Coater

February 27, 2023

Department of Physics organized a minor research session for M.Sc.-II Sem-IV students on “How to fabricate thin films by using spin coater” on 27-02-2023. 40 students participated in this project. Dr. Deep Shikha, faculty member of Physics Department explained the process of fabrication of thin films theoretically as well as experimentally. Students were able to acquire the basic knowledge about the fabrication of thin films and the method to use the spin coater. The students were able to clear their doubts right in the presence of working apparatus. Students were very happy and satisfied over this activity.
