

Field visit in the adjoining areas of Sri Anandpur Sahib and Govt Forest Nursery, Lamlehri (29.09.2026)

The PG Department of Botany organized one day field visit in collaboration with the 'Botanical Society' on 29.09.2026 to the adjoining areas of Sri Anandpur Sahib and Government Forest Nursery located in Lamlehri, Sri Anandpur Sahib for the students of B.Sc. Medical, Part III and M.Sc. Botany- Part-I and Part-II. The primary objective of this experiential learning visit was to bridge the gap between theoretical classroom lectures practical field botany, allowing students to study regional biodiversity, giving them a firsthand look at plant propagation and biodiversity conservation, natural forest structure, and modern silvicultural practices.

Guided by faculty members, Dr. Ravi Kant, Dr. Sartaj Singh and Prof. Mandeep Kaur, students identified the dominant flora of the region. The faculty highlighted how these species have morphologically adapted to the regional soil types. Students documented various lower plants, wild shrubs, medicinal herbs and trees, noted their ecological roles in preventing soil erosion along the undulating slopes and made inventory of all the plants observed there. During the visit in the Government Forest Nursery in Lamlehri, nursery officials conducted an extensive walkthrough of the facility. Students observed the systematically arranged sections dedicated to seed germination, root-trainer technologies, and sapling stabilization of commercial timber, ornamental plants, and ecologically vital species ready for distribution for local farmers. Respected Principal, Dr. Jasvir Singh, praised the faculty's initiatives and efforts in successfully conducting this field visit.
